Recommendations for a series of International Medical Science Pulse Conferences: the Public Higher Medical Professional School in Opole.

The Public Higher Medical Professional School in Opole is preparing and hosting a spectacular international annual conference under the patronage of the Medical Science Pulse quarterly since 2014. It is a scientific project whose main goal is to disseminate science in a friendly international environment of researchers, journal editors, publishers, representatives of renowned indexing databases and other professionals working towards the goal in reporting the latest evidence and scientific research as well as disseminating it among a wide range of audience with researchers, clinicians and students.

As a speaker and lecturer I have participated in the conferences since 2015. On the one hand, it is a unique opportunity for me to share knowledge, and on the other an opportunity to meet and exchange experiences not only with outstanding scientists from around the world, but above all with young researchers looking for their place in the world of science. It is also an opportunity to establish unique intergenerational relations and inspire young people with a passion for research work in order to increase their participation in science and encourage long-term scientific careers.

The recent conferences have also provided an opportunity for researchers to present their scientific achievements, including the latest research projects and the results of scientific research or development works. The presentations are documented in the form of conference publications in an abstracts book.

Medical Science Pulse conferences are part of the best and high in quality standards academic practices to promote a positive image of science in the global information world and contemporary discourse on science reforms and higher education in many countries, while it promotes the role of science and researchers in the development of societies.

Your sincerely,

Christos Lionis MD PhD FRCGP(Hon) FESC FWONCA

Professor of General Practice and Primary Care

Head of the Clinic of Social and Family Medicine, University of Crete, Greece, Guest Professor of Institute of Medicine and Health, School of Medicine, University of Linköping, Sweden
